

Setup

Windows

Setup Flutter in Windows

Download Required Files

1. **Download Android Studio**

<https://developer.android.com/studio>

2. **Download Flutter SDK**

(Windows)https://storage.googleapis.com/flutter_infra_release/releases/stable/windows/flutter_windows_3.35.6-stable.zip

Install the Files

1. **Extract Flutter SDK**

- Unzip the downloaded Flutter SDK file.
- Move the extracted folder to: `C:\Flutter\`

2. **Install Android Studio**

- Run the downloaded Android Studio installer.
- Continue the installation by pressing **Next** through the steps.
- When the **License Agreement** page appears, click **Accept** and press **Next**.
- Wait for all components to download and install – this may take a few minutes.

3. **Set Up Plugins**

- Once installed, open **Android Studio**.

- In the **Welcome to Android Studio** window:
 - Go to **Plugins → Marketplace**.
 - Search and install **Flutter**.
 - Search and install **Dart**.
- After installation, click **Restart IDE** when prompted.

4. Add Flutter to Environment Variables

- Search for environment variables in Start. And open it
 - Under **System variables**, select **Path** → click **Edit** → click **New**.
 - Add the following path:
`C:\Flutter\flutter\bin`
 - Click **OK** on all windows to save changes.
 - To verify, open **Command Prompt** and run:
`flutter --version`
You should see the Flutter version printed on the screen.
-

Create Your First Flutter Project

1. After restarting, click **New Flutter Project** on the welcome screen.
 2. In the **New Project** window:
 - On the left sidebar, select **Flutter**.
 - In the **Flutter SDK Path** field, browse to:
`C:\Flutter\flutter`
 - Click **Next**.
 3. Enter a **project name** and **location**, then click **Create**.
 4. Wait for Android Studio to finish creating the project.
-

Connect Your Android Device

1. **Enable Developer Options**

- Open **Settings** → **About phone** → **Software information**.
 - Tap **Build number** (or **Version number**) **7 times** to enable **Developer Options**.
2. **Enable USB Debugging**
 - In **Settings**, search for **USB Debugging** and enable it.
 3. **Connect Your Phone**
 - Connect your phone to the laptop using a **USB cable**.
 - Ensure it is **not in “Charging only” mode**.
 - Allow all required permissions and trust prompts.
-

Run the Flutter App

1. In Android Studio, locate the **device dropdown** at the top (it lists Chrome, Edge, Windows, and your phone name).
2. Select your **phone** from the list.
 - If your phone is not visible:
 - Click **Restart Flutter Daemon**.
 - Or **restart Android Studio** and try again.
 - If it still not works click the settings icon in the top right of Android Studio and select SDK Manager.
 - From there you can see the Android SDK Location.
 - Copy it and open cmd and enter the following and restart android studio

```
flutter config --android-sdk <path you copied>
```

1. Click the **Run (▶) button** on the top toolbar.
2. Wait for the build to complete – this may take some time on the first run.
3. Once done, the **default Flutter counter app** should appear on your phone screen.

Linux

Setup Flutter in Linux

Download Required Files

1. **Download Android Studio (Linux version)**
<https://developer.android.com/studio>
 2. **Download Flutter SDK (Linux)**
https://storage.googleapis.com/flutter_infra_release/releases/stable/linux/flutter_linux_3.35.6-stable.tar.xz
-

Install the Files

1. Extract Flutter SDK

Open your terminal and run:

```
cd ~  
mkdir development  
cd development  
tar xf ~/Downloads/flutter_linux_3.35.6-stable.tar.xz
```

This will extract Flutter to: `~/development/flutter`

2. Add Flutter to PATH

Temporarily add Flutter to your PATH:

```
export PATH="$PATH:$HOME/development/flutter/bin"
```

To make it permanent, add the same line to your shell config file:

- For **Bash** users:

```
echo 'export PATH="$PATH:$HOME/development/flutter/bin"' >>
~/.bashrc source ~/.bashrc
```

- For **Zsh** users:

```
echo 'export PATH="$PATH:$HOME/development/flutter/bin"' >>
~/.zshrc source ~/.zshrc
```

3. Verify Flutter Installation

Run:

```
flutter doctor
```

You'll see checks for:

- Flutter SDK
- Android toolchain
- Android Studio
- Connected devices

If you see warnings, don't worry – we'll fix them below.

Install Android Studio

1. Extract the downloaded **Android Studio** file and move it to **development** folder in home
2. Start Android Studio:

```
~/development/android-studio/bin/studio
```

3. Follow the setup wizard:
 - Press **Next** to install all required SDK components.
 - Accept the **License Agreement** when prompted.
 - Wait for it to finish downloading dependencies.
 4. Once the **Welcome to Android Studio** page appears:
 - Go to **Plugins → Marketplace**.
 - Search and install **Flutter**.
 - Search and install **Dart**.
 - Click **Restart IDE** when prompted.
-

Create Your First Flutter Project

1. After restarting, click **New Flutter Project**.
 2. In the **New Project** window:
 - Choose **Flutter** on the left sidebar.
 - For **Flutter SDK Path**, set it to:
`/home/<your-username>/development/flutter`
 - Click **Next**.
 3. Enter your **project name** and **location**, then click **Create**.
 4. Wait for the IDE to finish setting up the project.
-

Connect Your Android Device

1. **Enable Developer Options** on your phone:
 - Go to **Settings → About phone → Build number** (or **Version number**).
 - Tap it **7 times** to enable **Developer Options**.
2. **Enable USB Debugging**:
 - In **Settings**, search **USB Debugging** and enable it.

3. Connect the Phone via USB:

- Use a good-quality USB cable.
- Ensure it's **not in charging-only mode**.
- When prompted on the phone, tap **Allow USB debugging**.

4. Check if Device is Detected:

```
flutter devices
```

If you see your device name, it's connected successfully.

Run the Flutter App

1. In Android Studio, locate the **device dropdown** (top toolbar).
You should see your **phone name** along with other options like Chrome or Linux.
2. Select your **phone**.
3. If your phone isn't visible:
 - Click **Restart Flutter Daemon** in Android Studio, **or**
 - Run this in the terminal:

```
flutter doctor --android-licenses
```

```
- and accept all licenses
```

4. Click the **Run (▶)** button.
5. Wait for the build to complete – the first time may take a bit longer.
6. Once it finishes, you'll see the **default Flutter counter app** on your phone!

MAC

Setup Flutter in MAC OS

Download Required Files

1. **Download Android Studio (macOS)**
<https://developer.android.com/studio>
2. **Download Flutter SDK (macOS)**
https://storage.googleapis.com/flutter_infra_release/releases/stable/macos/flutter_macos_3.35.6-stable.zip

Install the Files

1. Extract Flutter SDK

Open the **Terminal** and run:

```
cd ~  
mkdir development  
cd development  
unzip ~/Downloads/flutter_macos_3.35.6-stable.zip
```

This extracts Flutter to: `~/development/flutter`

2. Add Flutter to PATH

Temporarily add Flutter to your PATH:

```
export PATH="$PATH:$HOME/development/flutter/bin"
```

To make it permanent, add the same line to your shell config:

- For **zsh** (default on macOS):

```
echo 'export PATH="$PATH:$HOME/development/flutter/bin"' >>
~/.zshrc source ~/.zshrc
```

- For **bash**:

```
echo 'export PATH="$PATH:$HOME/development/flutter/bin"' >>
~/.bash_profile source ~/.bash_profile
```

3. Verify Installation

Run:

```
flutter doctor
```

You'll see checks for:

- Flutter SDK
- Android toolchain
- Xcode (for iOS builds)
- Android Studio
- Connected devices

If you see warnings (like missing Android Studio or SDK), we'll fix them next.

Install Android Studio

1. Open the downloaded `.dmg` file for Android Studio.
 2. Drag **Android Studio** into your **Applications** folder.
 3. Launch it from **Launchpad** or **Spotlight** (**Cmd + Space** → **Android Studio**).
 4. Follow the setup wizard:
 - Click **Next** and install all SDK components.
 - Accept the **License Agreement**.
 - Wait for the installation to complete.
 5. On the **Welcome to Android Studio** page:
 - Go to **Plugins** → **Marketplace**.
 - Search and install **Flutter**.
 - Search and install **Dart**.
 - Click **Restart IDE** when prompted.
-

Create Your First Flutter Project

1. After restarting, click **New Flutter Project**.
 2. In the **New Project** window:
 - On the left sidebar, select **Flutter**.
 - In **Flutter SDK Path**, set:
`/Users/<your-username>/development/flutter`
 - Click **Next**.
 3. Enter your **project name** and **location**, then click **Create**.
 4. Wait for Android Studio to finish setting up the project.
-

Connect Your Android Device

1. **Enable Developer Options** on your phone:

- Go to **Settings** → **About phone** → **Build number** (or **Version number**).
 - Tap it **7 times** to enable **Developer Options**.
2. **Enable USB Debugging:**
 - In **Settings**, search for **USB Debugging** and enable it.
 3. **Connect your phone via USB:**
 - Use a reliable cable.
 - Make sure it's **not in charging-only mode**.
 - Allow permissions when prompted on your phone.
 4. **Check if the device is detected:**

```
flutter devices
```

If you see your phone name, it's connected successfully.

Run the Flutter App

1. In Android Studio, locate the **device dropdown** (top toolbar).
 - You'll see Chrome, macOS, or your Android device.
2. Select your **Android phone**.
3. If it doesn't appear:
 - Click **Restart Flutter Daemon** in Android Studio, or
 - Run:

```
flutter doctor --android-licenses
```

and accept all the licenses.

4. Click the **Run (▶)** button on the top toolbar.
5. Wait for the build to finish.
6. You'll see the **default Flutter counter app** on your phone!
